

Runs Everywhere

Acadiant Limited

02 January 2024

1 Acadiant Delivers Where You Are

1.1 Any Client, Any Server

Acadiant's versatile client software runs seamlessly on any iOS or Android smartphone or tablet, or any desktop equipped with a modern browser. With Acadiant, you can conveniently save the solution as an app on your home screen, your dock, or your task bar.

Acadiant's server-side services are compatible with any Linux or Windows VM, with both ARM and Intel architectures, or in containers within a Kubernetes cluster.

1.2 Use what you have now; future-proof solutions

Every Acadiant solution is both a desktop app and a mobile app, designed to exploit the capabilities of each platform optimally. If you're currently desktop-only but plan to support tablets later, you're already prepared with Acadiant.

If your current operations are on your own servers and you're considering a migration to a public or private cloud, or vice versa, Acadiant eases the transition. We can redistribute our services to make that transition simple; just update the system manifests accordingly.
